**EXPANDED INSULATION CORKBOARD OBTAINS A+ LABEL =
THE BEST INDOOR AIR QUALITY**

Date: 2011

Expanded insulation cork board manufactured by Amorim Isolamentos, has an A+ evaluation according to the French VOC-Regulation. Our tests are available upon request.

What does the new labeling of construction and decoration products consist of?

French Décret 2011-321 regarding a mandatory labeling of construction products installed indoors, floor and wall coverings, paints and lacquers with their emission classes based on emission testing was signed in May 2011.

What does the official label mean?

This regulation foresees that from 1. Jan. 2012, any covered product placed on the market has to be labelled with emission classes based on their emissions after 28 days, as tested with ISO 16000 and calculated for European reference room. The labeling will indicate the level of volatile pollutant emissions, on a scale from A+ (very low emissions) to C (high emissions), next to an image of a house containing a cloud of pollutants.

What are the substances affected by the labeling requirement?

The targeted pollutants are those which are most frequently encountered in housing, including formaldehyde, acetaldehyde, toluene, tetrachloroethylene, xylene, trimethylbenzene, dichlorobenzene, ethylbenzene, butoxyethanol and styrene, as well as the total volatile organic compounds (TVOC).
